

Andrew Lien

Like: Andy is capable of taking control of the team when needed and is knowledgeable on a variety of subjects. Otherwise, the team hasn't been around long enough for me to be able to accurately assess Andy's performance.

Improve: Andy can improve his aerobic respiration efficiency by at least 13% if he tries.

Brought up the idea of creating a ride share application. He also provided framework ideas such as ionic and meteor. Also created the GIT repository so we have a place to start.

Provided his experience with specific frameworks and suggested a great framework which we all agreed on, as well as provided specifics about the framework, reasoning, and applicability. Took the initiative to plan out meeting times as well as group communication, and provided great resources to support his suggestions. Went over and discussed availability and meeting times, as well as coordinated us on a group chat to discuss team name.

Kent Diao

Like: Kent appears knowledgeable on a variety of subjects. Otherwise, the team hasn't been around long enough for me to be able to accurately assess Kent's performance.

Improve: Kent's first name is too similar to Ken's, which will confuse my already overworked brain.

Helped the team with coming up with ideas for our upcoming project. It has been two days, so there's not much to write about.

Bryant Tran

Like: Bryant appears knowledgeable on a variety of subjects. Otherwise, the team hasn't been around long enough for me to be able to accurately assess Bryant's performance.

Improve: Bryant is way too charismatic, and frankly it's quite frightening and alarming.

Contributed skillsets to the team.

Briefed us on his experience over the summer and his current position to explain his skillset and interests in order to help the team better understand how he fits into the team dynamic. Also went over availability and contributed into the discussion about the team name as well as many insights on project ideas, specifications, requirements, functionality, usability, and modularity.

Kangdi Ni

Like: Ken appears knowledgeable on a variety of subjects. Otherwise, the team hasn't been around long enough for me to be able to accurately assess Ken's performance.

Improve: Ken appears to be fairly happy in life, which for a college senior is unacceptable behavior.

He gave us his spiel about his expertise in his programming skills, which gave the team hope.

Kangdi currently has a job which involves scrum, quite knowledgeable and a good asset to the team.

Explained that his current position at an internship where he specializes in project management would make him a good scrum master, as well as volunteered to utilize his skill set to maintain the group board/chat. Went over and discussed his availability and skillset to fit the team dynamic and also provided many insights and concerns during our discussion of possible projects, collaboration specifics, and frameworks.

John Ta

Like: John appears knowledgeable on a variety of subjects. Otherwise, the team hasn't been around long enough for me to be able to accurately assess John's performance.

Improve: The puns put forth by John during the discussion about the team name were of inferior quality, and quite frankly, I expect significant improvement.

He did very well helping the team stay on topic during our team conversations. He also helped create the name of the team.

Introduced the idea of trello which has multiple chats with the same people. This is helpful due to the fact that there will be many iterations to lead up to the final release project.

Provided excellent feedback on the many framework and project suggestions based on his experience with the subject, as well as explained his skillset and gave insight about the framework we agreed on to really solidify a group understanding. Also worked to gather everyone and give suggestions for team name, means of communication, and discussed availability, meeting times, and possible alternate projects.

Taylor Stratton

Taylor did a good job making sure we stay on top of things, especially deadlines.

Provided excellent feedback on project ideas and made suggestions about project ideas and frameworks. Identified his skillset and also explained his willingness to adapt to whatever framework the team decides best fits the project. Discussed and offered insight on project type, specification, and requirements. Worked to communicate and gave suggestions for team names, availability, meeting times, and possible other projects in case we decide our current one is too overused.
