Sprint #1 Plan
SlugSearch - TeamHipster
10/07/15

Goal: Create a working executable that successfully scrapes the server for class information. This includes sending data to the server, analyzing the response, and displaying the received data in a useful format.

User story: As a user, I want to filter class parameters so I can search for the classes I want. (total: 9 hrs)
- Task: Create a web scraper that will grab info off of the website (6 hrs)
- Task: Send the server the correct data so it will give us the results we want (3 hrs)
- Team members: Andy, John (scrum master)

User story: As a user, I want to see a list of my search results so I can see what classes are available. (total: 6 hrs)
- Task: Take data from the server and display each object as an item in a list (6 hrs)
- Team members: Taylor, Kent

User story: As a user, I want to see more info about a class so I can be better informed about each class. (total: 15 hrs)
- Task: Turn each list object into an interactive element (5 hrs)
- Task: Get description info from server and display it (6 hrs)
- Task: Make UI of the app not look horrible (4 hrs)
- Team members: Bryant (scrum master), Ken (product owner)

Scrum times: Sun 5:00 PM, TuTh 6:00 PM

Burn-up chart and scrum board are in the github repository.
